This invention describes a novel humanized anti-Fas antibody-like
molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas
ligand system, by binding to Fas on the cell surface, and prevents
capptosis in cells with a normal system, by inhibiting binding between
capptosis in cells with a normal system, by inhibiting binding between
capptosis in cells with a normal system, by inhibiting binding between
canti-indiamatory, darmatological, immunosupressive, thyromimetic,
antirheumatic, nephrotropic, antiinfertility, neuroprotective,
cantiartisoclerotic, cardiant and hepatropic activity. (I) induce
apoptosis by binding to cell surface Fas or inhibit it by competitive
capptosis by binding to cell surface Fas or inhibit it by competitive
capptosis by binding to cell surface Fas or inhibit it by competitive
capptosis by binding to cell surface Fas or inhibit it by competitive
capptosis by binding to cell surface Fas or inhibit it by competitive
capptosis by binding to cell surface Fas or inhibit it by competitive
colls surfaces associated with the Fas/Fas ligand system, especially systemic
cutions of ligand binding in syndrome, permicious or hypoplastic
canemia, Addison's disease, scleroderma, sterility, myasthenia gravis,
calisase, autoimmune hemolytic anemia, sterility, myasthenia gravis,
cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral
cells. They bind to both human and murine Fas, so can be evaluated in
centis the apoptosis in normal cells but selectively induce it in abnormal
cells. They bind to both human and murine Fas, so can be evaluated in
centis the native ligand, do not induce liver disease, and have reduced risk of
inducing a human anti-murine antibody response. This sequence represents
ca humanised anti-marine antibody response. This sequence represents
can humanised anti-marine disease, antibody HEFAA designed heavy chain which is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GQGLEWMGEIDPSDSYTNYNQKFKGKATITVDTSTSTAYMELSSLRSEDTAVYYCARNRD 120

continuous in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, antidiabetic, anti-allergic, anti-arthritic, antiviral, immunomodulatory, dermatological, immunosupressive, thyromimetic, antiviral, immunomodulatory, dermatological, immunosupressive, thyromimetic, antirheumatic, nephrotropic, antiinfertility, neuroprotective, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce antiarteriosclerotic, cardiant and hepatropic activity. (I) induce apportosis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding (I) are used to treat and/or prevent classase associated with the Fas/Fas ligand system, especially systemic diseases associated with the Fas/Fas ligand system, especially systemic versus host disease, Slorgen's syndrome, pernoious or hypoplastic versus host disease, soleroderma, Goodpasture syndrome, Crohn's disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, cardiomyopathy, glomerulonephritis, hepatis (fulminant, chonic, viral cardiomyopathy, glomerulonephritis, hepatis (fulminant, cardiomyopathy, glomerulonephritis, hepatis (fulminant, cells), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in mormal endisease models. (I) act on the active site of Fas, i.e. they minic murine disease models. (I) act on the active site of Fas, i.e. they minic inducing a human anti-murine antibody heavy chain construct designated Heu 3 which is described in the method of the invention.

used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, New antibodies and proteins bind conserved epitope of Fas antigen myocarditis, hepatitis and AIDS

Claim 22; Page 212-213; 292pp; English.

This is the amino acid sequence of the VD type humanised heavy chain of murine anti-human Fas monoclonal antibody HFE7A. E. coll pgHSL7A62 SANK 73397 harbors plasmid pgHSL7A62 carrying a fusion fragment of the humanised VD type HFE7A heavy chain and DNA encoding human IgG1 constant region (see AAV70079), and is deposited as FERM BP-6074 (claimed). The invention provides methods for producing humanised antibodies by culturing host cells. Humanised versions of HFE7A (see AAW83031-37), like native HFE7A, are capable of inducing apoptosis in abnormal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells. The humanised antibodies are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also

AAW83036 standard; Protein; 470 AA.

The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA, or a humanised version of HFETA containing identical CDRs (complementarity determining regions) to antibody HFETA. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allery, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS represent the heavy chains (or fragments thereof) of various humanised HFETA-derived anti-Fas antibodies.
                                                                                                                                                                                                                                                                Preventive or treating agent for the diseases caused by an abnormality in the Fas/Fas ligand system e.g. autoimmune diseases, contains

New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in

Example reference 15; Page 134-136; 263pp; English.

This invention describes a novel humanized anti-Fas antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents apoptosis in cells with a normal system, by inhibiting binding between apoptosis in cells with a normal system, by inhibiting binding between the apoptosis in antidiabetic, anti-allergic, anti-arthritic, antiviral, continuatic, antidiabetic, antiminentality, neuroprotective, antinineuratic, nephrotropic, antiminertility, neuroprotective, antinineuratic, nephrotropic, antiminertility, neuroprotective, antiminertility immunosuppressive, thyromimetic, antimineuratic cardiant and hepatropic activity. (I) induce apoptosis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding. (I) are used to treat and/or prevent capptosis by binding to cell surface Fas or inhibit it by competitive inhibits apoptosis by binding to cell surface system, especially systemic versus host disease, Slorgen's syndrome, pernicious or hypoplastic versus host disease, Slorgen's syndrome, pernicious or hypoplastic anemia, Addison's disease, cleroderma, Goodpasture syndrome, Crohn's disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, antiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral (B, C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in cardine disease models. (I) act on the active site of Fas, i.e. they minic inducing a human anti-murine antibody HESPA designed heavy chain which is used in the method described in the invention.

This invention describes a novel humanized anti-Fas antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-damentoly anti-arthritic, anti-inflammatory, immunomodulatory, dermatological, immunosuppressive, thyromimetic, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce apoptosis by binding to cell surface Fas or inhibit to prompetitive inhibition of ligand binding. (I) are used to treat and/or prevent cinhibition of ligand binding. (I) are used to treat and/or prevent inhibition of ligand binding. (I) are used to treat and/or prevent anamia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's corrus host disease, scleroderma, Goodpasture syndrome, Crohn's disease, autoimmune hemolytic anemia, sterility, mysthania gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arterlosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral (B, C or D) or alcoholic), and transplant rejection. (I) selectively induce it in abnormal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they mimic the nutive ligand, do not induce liver disease, and have reduced risk by human anti-murine antibody response. This sequence represents which is adearnibed in the antivordice in the active site of Fas, i.e. they mimic which is a dearnibed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GQGLEWMGEIDPSDSYTNYNQKFKGKATITVDTSTSTAYMELSSLRSEDTAVYYCARNRD 120

The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytocoxic portion having endonucleolytic activity, exemplified by AAM52154.368 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polymorphic epithelial mucin; PEM1;
I; human; cytostatic; cancer; apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GOGLEWMGEIDPSDSYTNYNOKFKGKATITVDTSTSTAYMELSSLRSEDTAVYYCARNRD 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           361 kakgqprepqvytlppsreemtknqvsltclvkgfypsdiavewesngqpennykttppv 420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytotoxic portion having endonucleolytic activity, exemplified by AAM52154-AAM52168 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                               PEM1;

having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytotoxic portion having endonucleolytic activity, exemplified by AAM52154-AAM52168 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.

                                                                                                                                                                        The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytotoxic portion having endonucleolytic activity, exemplified by AAM$2116+AAM$2168 and encoded by ABA02582-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polymorphic epithelial mucin; PEM1;
I; human; cytostatic; cancer; apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        297

                                                                                                                                                                                                                                                                                                                    The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytocoxic portion having endonucleolytic activity, exemplified by AAM52154-AAM52168 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GQGLEWMGEIDPSDSYTNYNQKFKGKATITVDTSTSTAYMELSSLRSEDTAVYCARNRD 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 16, Application US/0887352B
Patent No. 5994511
GENERAL INFORMATION:
APPLICANT: Henry B. Lowman, Leonard G. Presta, Paula M. Jardieu, John Lowe TITLE OF INVENTION: Improved Anti-IgE Antibodies and Method of TITLE OF INVENTION: Improving Polypeptides
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
ADDRESSE: Genentech, Inc.
STREET: 1 DNA Way
CITY: South San Francisco
STATE: California
                                                                                                                                                                   ñ

Ig gamma 2b chain constant region - pig (fragment)
C;Species: Sus scrofa domestica (domestic pig)
C;Date: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_change 21-Jan-2000
C;Accession: 147160
R;Kacskovics, I:;Sun, J:;Butler, J.E.
A;Title: Five putative subclasses of swine IgG identified from the cDNA sequence number: 147158; MUID:95015845
A;Accession: 147160
A;Accession: 147160
A;Actus: preliminary; translated from GB/EMBL/DDBJ
A;Rolcule type: mRNA
A;Residues: 1-328 <RAC>
A;Cross_references: EMBL:U03780; NID:9433125; PIDN:AAA52218.1; PID:9433126
